Oracle Academy
Java for AP Computer Science A

2-3

Introduction to Object-Oriented Programming Concepts

**ORACLE**
Academy

Objectives

- This lesson covers the following objectives:
    - Differentiate between procedural and object-oriented programming
    - Understand a class as a blueprint for an object
    - Understand a class is used to create instances of an object
    - Model objects as a combination of …
        - Properties (data fields)
        - Behaviors (methods)

Review

- So far, we've taken ...
  - Decades of computer science innovation
  - Gigabytes of modern computing power

- And much like the Internet ...
 - We've made a cat!

```
         /\                 /\
        /  \  _____  /  \
       /   \/           \/    \
      (   /\             /\    )
   ==== /  \      V     /  \ ====
   ====== (___|___) ======
          (            )
           (_____)
```

ORACLE
Academy

Java Can Do More!

- Procedural languages …
  - Read one line at a time
  - The C language is procedural

- Object-oriented languages…
  - Read one line at a time
  - Model objects through code
  - Emphasize object interaction
  - Allow interaction without a prescribed order
  - Java and C++ are object-oriented languages

JavaAPCSA 2-3
Introduction to Object-Oriented Programming Concepts

Object-Oriented Programming

- Interaction of objects
- No prescribed sequence

Exercise 1

- Go to https://objectstorage.ca-toronto-1.oraclecloud.com/n/yzr73ksbiwdp/b/Games/o/JavaPuzzleBall/index.html

- Play Basic Puzzles 1 through 5
  - Your Goal: Design a solution that deflects the ball to Duke

- Consider the following:
  - What objects do you find on the field of play?
  - What happens when you put a triangle wall or simple wall icon on the blue wheel?

ORACLE
Academy

About Java Puzzle Ball

- Play a set of puzzles

- Become familiar with the game mechanics

- Consider questions as you play

- Listen to the lesson's debriefing on what you've observed

- Apply your observations to understand Java concepts

JavaAPCSA 2-3
Introduction to Object-Oriented Programming Concepts

Object Types

- What objects did you find on the field of play?

 - Ball

  - Duke

  - LevelGeometry

  - RedBumper

  - BlueBumper
9

Object Interaction

- Interaction of objects
- No prescribed sequence

Let's take a closer look at this object

ORACLE
Academy

BlueBumper Objects

- What happens when you put a triangle wall or simple wall icon on a blue wheel?

- A wall appears on every instance of a blue bumper object

- Walls give bumpers behaviors that deflect and interact with the ball

- All blue bumper instances share these same behaviors

Instance

Instance

ORACLE
Academy

Describing a BlueBumper

- Properties:
  - Color
  - Shape
  - x-position
 - y-position

- Behaviors:
  - Make ping sound
  - Flash
  - Deflect ball (via Simple Wall)
  - Deflect ball (via Triangle Wall)

Describing a Ball

- Properties:
 - Direction
  - x-position
  - y-position

- Behaviors:
  - Make ping sound
  - Change direction
  - Change x-position
  - Change y-position

ORACLE
Academy

BlueBumper and Ball Interaction

- Interaction occurs when the BlueBumper deflects the Ball. When this happens …

- The Ball's properties change:
  - The Ball travels in a different direction
  - The Ball's future x-position and y-position change

- The BlueBumper performs behaviors:
  - Makes ping sound
  - Flashes

ORACLE
Academy
Why Does This Matter?

- We've observed important aspects of object-oriented programming

- Remember these observations as lessons and exercises become increasingly technical
  - Objects can be described as a combination of properties and behaviors
  - There may be many instances of the same object type
  - All instances of an object share the same behaviors
  - Objects may interact with each other, possibly affecting each other's properties and triggering other behaviors

A Different Example

- Properties:
 - Name
  - Age
  - Breed
  - Favorite Food

- Behaviors:
  - Make meow sound
  - Play
  - Wash
  - Eat
  - Hunt

JavaAPCSA 2-3
Introduction to Object-Oriented Programming Concepts
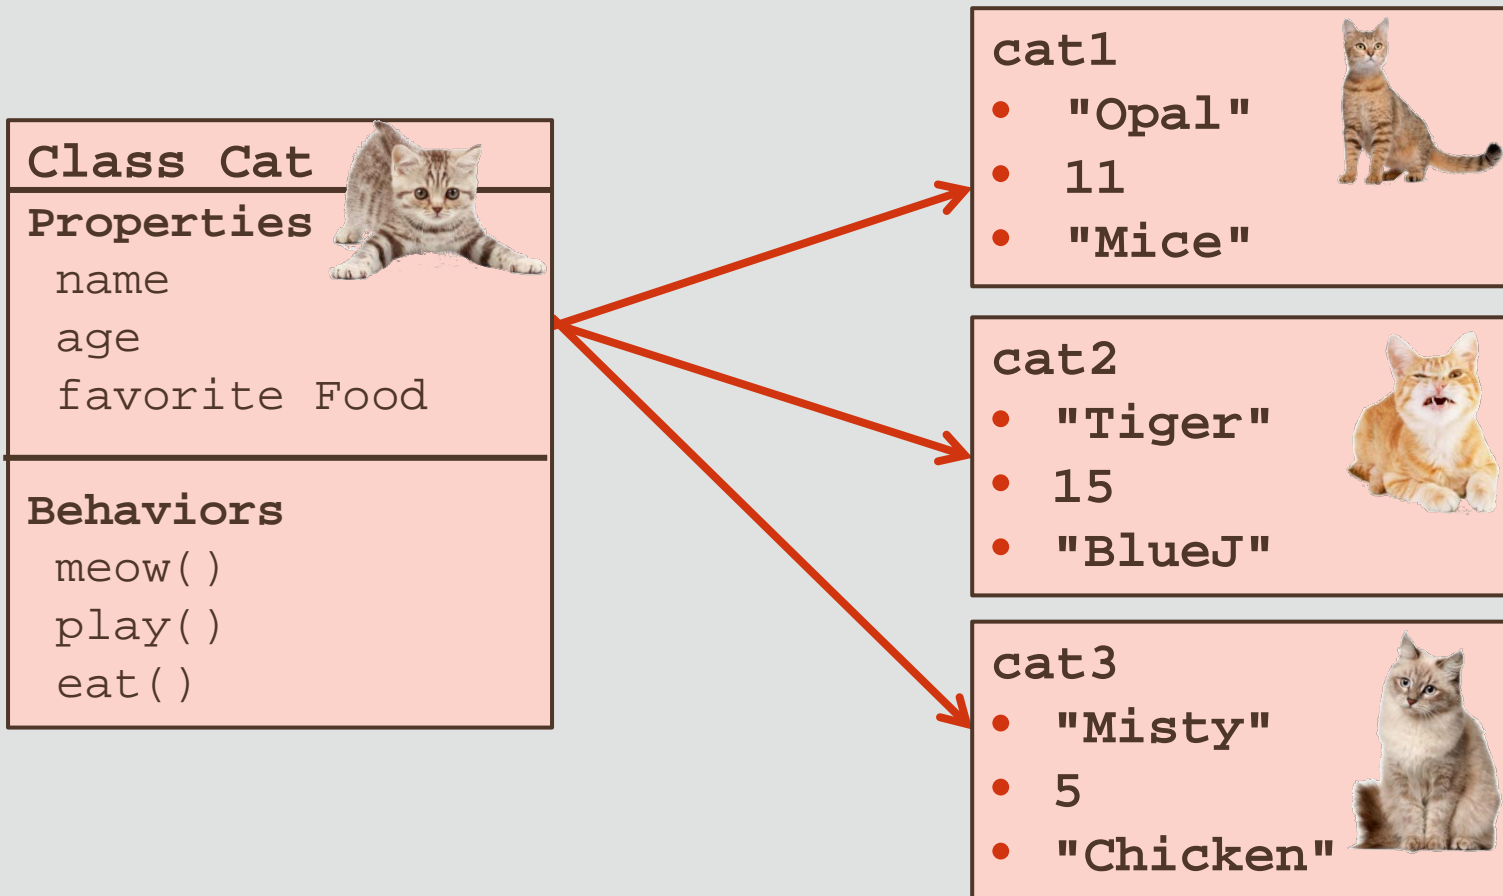

Classes and Instances

- The combination of properties and behaviors is …
  - Called a class
  - A blueprint or recipe for an object
  - Used to create object instances

Object instances

Cat class

  -Properties

  -Behaviors
Creating New Instances from a Blueprint

Class Cat

Properties
name
age
favorite Food

Behaviors
meow()
play()
eat()

cat1
- "Opal"
- 11
- "Mice"

cat2
- "Tiger"
- 15
- "BlueJ"

cat3
- "Misty"
- 5
- "Chicken"

All cat instances share the ability to meow, play, and eat

JavaAPCSA 2-3
Introduction to Object-Oriented Programming Concepts

Object-Oriented Strategy

- How do you write programs that achieve this level of flexibility?

- When you have an idea or requirement for a program …
  - Consider what type of objects may exist in this program
  - Consider the properties and behaviors of these object types
  - Consider how objects interact

Duke's Choice Online Shopping
Characteristics of Objects

- Objects are physical or conceptual
- Objects have properties:
  - Size
  - Price
  - Color
- Objects have behaviors:
  - Shop
  - Put item in cart
  - Pay

Physical: Shirt

Conceptual: Online Account

Color property value is red

Mrs. Duke

JavaAPCSA 2-3
Introduction to Object-Oriented Programming Concepts

Classes and Instances

- Remember, a class …
  - Is a blueprint or recipe for an object
  - Describes an object's properties and behaviors
  - Is used to create Object instances

Object instances

Class
 -Properties

 -Behaviors

ORACLE
Academy

Exercise 2, Part 1

- Given the following scenario, what objects could you potentially model to complete your program?
  - Design a program for a coin-sorting machine
  - This machine should measure, count, and sort coins based on their size or value
  - It should also print a receipt

- List at least 3 objects you would need to model for this example:
 -
  -
  -

Exercise 2, Part 2

- Chose an object from Part 1

- What properties and behaviors of this object could you include in your program?

- Properties:
  -
  -
  -

- Behaviors:
  -
  -
  -

Customer Properties and Behaviors

- Properties:
  - Name
  - Address
  - Age
  - Order number
  - Customer number

- Behaviors:
  - Shop
  - Set address
  - Add item to cart
  - Ask for a discount
  - Display customer details

JavaAPCSA 2-3
Introduction to Object-Oriented Programming Concepts

Translating into Java Syntax

```
 1   public class Customer {
 2
 3
 4                     Properties
 5
 6
 7
 8                     Behaviors
 9
10
11   }
```

ORACLE
Academy

Java Terminology

Class declaration

```
 1 public class Customer {
 2     public String name = "Junior Duke";
 3     public int    custID = 1205;
 4     public String address;
 5     public int    orderNum;
 6     public int    age;
 7
 8     public void displayCustomer(){
 9         System.out.println("Customer: "+name);
10     }//end method displayCustomer
11 }//end class Customer
```

Fields
(Properties)
(Attributes)

Methods
(Behaviors)

JavaAPCSA 2-3
Introduction to Object-Oriented Programming Concepts

Modeling Properties and Behaviors

Customer class	──── Class name
name address billing info age customer number order number	Fields
requestDiscount() setAddress() shop() displayCustomer()	Methods

Data Fields

- Fields or Data Fields are the official Java terminology
- They're also called:
  - Properties
  - Attributes
  - Data Members
- Java has particular ways of representing data
  - Section 3 will take a closer look at data
  - We'll use the main method for this investigation
  - For now, it's alright to include a lot of code in the main method
  - BUT a large main method is strongly discouraged
  - Section 4 explores how to avoid this scenario

JavaAPCSA 2-3
Introduction to Object-Oriented Programming Concepts

Summary

- In this lesson, you should have learned how to:
  - Differentiate between procedural and object-oriented programming
  - Understand a class as a blueprint for an object
  - Understand a class is used to create instances of an object
  - Model objects as a combination of …
    - Properties (data fields)
    - Behaviors (methods)
